

## AS Solar: Highest energy yields with the AS Celaeno

Hannover, August 14, 2009

With the solar module AS Celaeno AS Solar offers the innovative solution for extracting the maximum amount of energy from the sunlight. This high-tech product features the Albarino P solar glass by Saint Gobain which, due to its patented surface structure, minimizes light reflections which ensures the optimal use of the irradiance and thus produces a maximum energy yield. The special pyramid structure increases the energy yield by at least 3%, in slanted positions even up to 20%. Because of that the module is especially suited for the use in locations with unfavourable incidences of light.

The core of every solar module are without a doubt the cells. The AS Celaeno is equipped exclusively with high-quality cells by the company Q-Cells. The biggest solar cell manufacturer worldwide from Germany stands with its name as a synonym for reliability and highest quality. Connection boxes, cables and plugs are manufactured by Tyco and guarantee a long-term and secure electrical operation.

In connection with the 4mm thick solar glass the extra stable aluminum frame contributes to a high load capacity of the module. This ensures optimal safety already during transport and installation as well as with high snow loads.

Due to the professional processing AS Solar gives a product warranty of 5 years for the module. The power output guarantee is even 20 years
