

# AS Seginus - Highest Yields Thanks to High Quality

Harvesting infinite energy

**AS Seginus**

## Connection Box

**tyco**

The connection box with integrated diodes by Tyco guarantees your safety – for the entire period of use.

## Cells

**MOTECH**

As the core of the module the cells are especially important. Because of that we rely only on quality cells by renowned manufacturers like Motech.

## Solarglas

**SAINT-GOBAIN**

Weathering and hail cannot harm the Seginus. The solar glass by Saint Gobain provides highest safety and optimal light transmission values at the same time.

## Plugs and Cables

**tyco**

Cables and plugs are usually the first indicators for age of a photovoltaic system. Because of that Tyco only relies on high quality materials — robust and weatherproof!

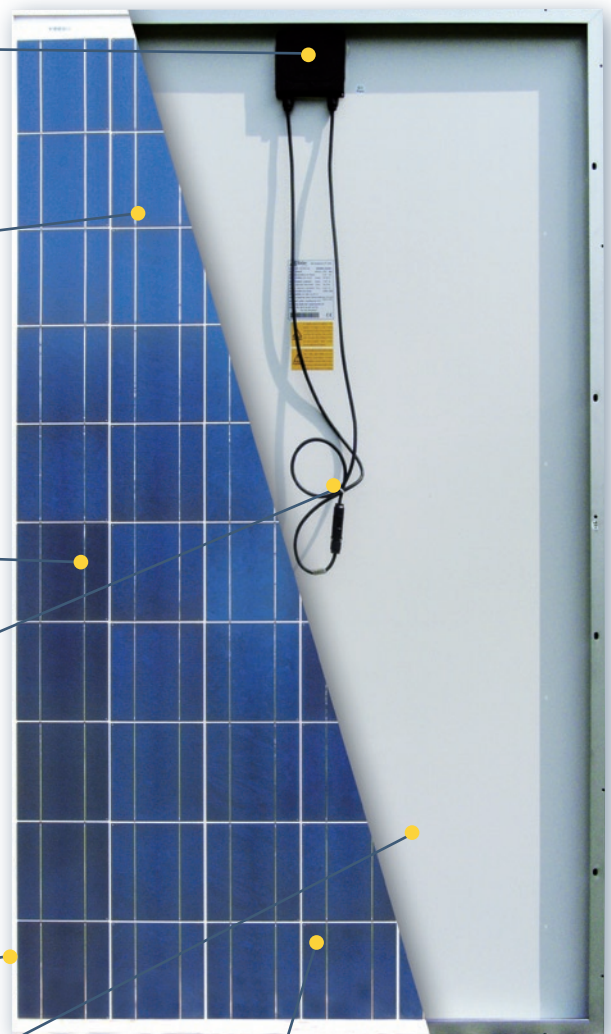

## Frame

Through its outstanding stability the frame ensures that your module is always protected optimally during transport, installation and handling.

## Backsheets

**MADICO**

The Madico backsheet film protects the module reliably and increases the module's rate of efficiency with its white color.

## EVA-Folie

In order to ensure that the modules still work with full efficiency even after more than 20 years the EVA-foil by First effectively prevents discolorations thanks to its UV-resistance.
